

Scaling-up smart electromobility solutions in Europe

EV4SCC partner's commitment to action

Our Ambition

As representatives of cities and regions, we understand the benefits of electromobility: less noise, greenhouse gas emissions and air pollution reduction, but also exciting new opportunities for mobility services and infrastructure integration, when combined with innovative ICT solutions.

EV4SCC was created as part of the European Innovation Platform for Smart Cities and Communities launched in 2014. Today, the EV4SCC platform represents 59 partners from 17 countries, including 15 cities and regions. It brings together start-ups, SMEs, research organisations, large companies and public authorities. It spans the sectors of transport, energy and ICT, because we know that smart electromobility builds on integrated solutions.

We want to continue to work together and support EV4SCC to create a dynamic European marketplace for smart electromobility solutions.

Our Commitment to Action

To achieve this, we have to overcome fragmentation of markets and better utilise our joint wealth of experience and expertise.

By coming together, we declare our willingness to accelerate the deployment of electromobility solutions by supporting cities and regions to adopt them at scale in key market segments such as:

- Intelligent management of public and private fleets of electric vehicles
- Smart urban logistics with light electric vehicles
- Smart electrification of public transport
- Innovative integrated infrastructure solutions
- Smart electromobility solutions that serve multi-modal mobility services

We support the ambition that the **EV4SCC platform** will provide dedicated expertise, animation and support to:

- **Champion** the needs of cities and regions, the capabilities of practitioners and the benefits of smart electromobility solutions
- **Connect** practitioners, problem-solvers and procurers in an engaged community
- **Accelerate** the deployment, replication and adaptation of solutions across Europe

The outcomes of this will be:

- **50** cities from across Europe to join the platform
- **50%** SME participation in the EV4SCC platform, supporting SME growth and competitiveness
- **50%** increase in the number of active collaborations between EV4SCC partners
- **50** new projects by the end of 2017 which will focus on one of the key market segments

We recognise the active role we need to play in order to make this a success and we are committing today our support to EV4SCC.

We encourage public and private sector organisations from across Europe to join EV4SCC to create the **world's largest marketplace for smart electromobility solutions.**
